

Special Issue

Implementation of Biodiversity and Ecosystem Services in Marine Ecosystem Management

Message from the Guest Editor

New methodological approaches are probably necessary to fill in the existing knowledge gap between land and marine ecosystems. The perspective and/or the maintenance of human wellbeing necessarily asks for a bigger contribution (in terms of direct resources and indirect services) of the marine environment, which represents 71% of the Earth surface. The present Special Issue aims to put together classical and innovative studies of the submarine world, mostly those parts (e.g., the mesophotic-aphotic, or the open sea) from where new information arrives in terms of Carbon sequestration, tourist attraction, fishery management and new food sources, new biological products, other than the consciousness of where the most urban litter goes.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
