

Special Issue

Early Detection, Control, and Management of Invasive Alien Species in Aquatic Environments

Message from the Guest Editors

Dramatic impacts following the establishment of invasive alien species (IAS) have been observed in the aquatic realm, particularly in fresh waters. Management actions are thus crucial in order to avoid new invasions and to mitigate the ongoing ones. The Issue will cover management actions in both marine and freshwater environments, covering all of the taxonomic groups, in order to present the most updated overview about IAS management in aquatic environments. Papers dealing with innovative and traditional techniques presenting preliminary and/or extensive results will be considered. Meta-analyses and review papers are also welcome.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
