

## Special Issue

# Long-Term Water Resource Management and Planning in Water-Scarce Regions

### Message from the Guest Editor

- Long-term trends in climate, demographic, and economic systems;
- Economic costs and benefits associated with various water allocation strategies;
- Expenditures needed to meet the growing water demand;
- Implications of different funding strategies used to develop new water supply sources; and other related topics.

Keywords: water-scarce regions; long-term; planning; management; water demand; water supply; natural systems; expenditures; investment strategies; funding; climate; population increase; economic expansion

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
