

Special Issue

Low-Cost Water Management Solutions

Message from the Guest Editor

In the last few years, the wide concerns about water scarcity, water pollution and circular economy have resulted in an emerging interest in the development of low-cost water treatment systems. Wastewater treatment and reutilization has been pointed out as a cornerstone of future sustainable towns, factories and other water demanding activities. Conventional technologies of water treatment and reutilization were developed during the past century inside a context of massive fossil fuel and resources utilization. Nowadays, this picture has changed and technologies of low carbon and reduced energy consumption must be adapted to every human activity. In this scenario, low-cost water management strategies must be adopted. Our goal in proposing this special issue entitled “Low-cost water management solutions” is to combine innovative and already established research activities on environmentally friendly technologies of water management.[...]

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
