Advanced Applications of Electrocoagulation and Water Quality Monitoring Techniques

Message from the Guest Editors

“Advanced applications of electrocoagulation and water quality monitoring techniques” (AAEWQMT) is a Special Issue of *Water* devoted to the interdisciplinary subject of electrocoagulation and water quality monitoring in all its aspects in water and wastewater, both theoretical and applied. AAEWQMT focuses on the publication of both original work and reviews in the field of electrocoagulation and water quality techniques used in the treatment of water and wastewater. AAEWQMT provides fast dissemination of original articles, reviews, short communications and full communications covering the whole field of electrocoagulation applications in water and wastewater and water quality monitoring techniques in both fields. Short communications are limited to a maximum of 21,000 characters (including spaces) while full communications are limited to 26,000 characters (including spaces). We aim to be the fastest Special Issue in the journal. [...] For further reading, please follow the link to the Special Issue Website at: https://www.mdpi.com/journal/water/special_issues/mo_nitoring_techniques

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
