

## Special Issue

# The Politics of the Human Right to Water

### Message from the Guest Editors

The politics of the human right to water is much older, it stretches back to at least the 1970s; the 1990s, when both anti-privatization movements and multinational water corporations embraced it for their opposing campaigns; or the early 2000s, when lawyers and local communities invoked General Comment No. 15 on the Human Right to Water to improve affordable access. Today, the human right to water is the subject of diverse political struggles that seek to address the challenge that 750 million people do not have access to clean water—a lack that has been highlighted by the rapid spread of COVID-19. This Special Issue invites contributions on the politics of human rights: its origins, its uses, and its effects. We are interested in papers that trace the emergence of the right in political discourse and legal documents, its use by different actors for diverse political goals, and/or its impact in practice—whether in improving access or affecting underlying politics. This Special Issue is interdisciplinary, and we encourage submissions from scholars and practitioners working in the social sciences, law, humanities, and natural sciences.

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
