

## Special Issue

# Integration of Remote Sensing Information in the Analyses of the Dynamic of Water Resources Systems

### Message from the Guest Editors

This Special Issue aims to collect research works on the integration of remote sensing information in the analyses of the dynamics of water resources systems. Potential topics included (but not limited to them) are:

- Dynamics of hydroclimatic variables (humidity, evapotranspiration, soil moisture, etc.);
- Dynamics of lakes and flooding (surface and/or volume of water);
- Dynamics of snow cover area and/or snow depth and water equivalent;
- Dynamics of land uses and irrigation.

---

### Guest Editors

Dr. David Pulido-Velázquez

Dr. Antonio Juan Collados-Lara

Dr. Simon Stisen

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
