

Special Issue

Safe Water as a Sustainable Right

Message from the Guest Editor

Water itself is strictly interconnected in a global dimension, and it is somehow a fundamental leitmotif for approaching a One Health vision. Contributions from different disciplines are very welcome and should describe specific issues representing milestones in the field. The frame is large, comprising technical improvements of monitoring and disinfection technologies, social issues, national policies and epidemiological reports, regarding the analysis of sustainable use and access to water on a global scale or reporting exemplifying experiences in specific local areas. A main focus of interest involves the availability of guidelines for managing pathogens or preventing health threats. Several objectives can be addressed, including access to safe water as a human right or the recreational use of water as a physical benefit for populations of any age. In conclusion, this SI will host feature papers approaching one or more of the different questions related to water as an endangered resource to protect as well as an extraordinary opportunity for improving personal, social and environmental health considering effective and sustainable pathways both on a local and a global scale.

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
