

## Special Issue

# Soil Moisture Content and Crop Production Research

### Message from the Guest Editors

Water is a critical factor affecting crop production. Water scarcity has restricted the expansion of irrigation agriculture. Hence, studying the relation between soil water content and crop production is important in order to improve water productively and to ensure sustainable crop production under limited water resources. The scope of this Special Issue is to collect manuscripts that present novel studies, approaches, and management methods that can enhance our understanding of the relationship between soil water content and crop production at different scales under ambient and climate change conditions. Review manuscripts are also welcome. 4 papers have been published. For more details, please find at:

## About the Journal

### Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
