The Blue Economy: Evaluating the Human Benefits from and Pressures on Marine and Coastal Environments

Message from the Guest Editors

The Blue Economy involves coupling the economic and environment sustainability of our ocean and coastal zone settings worldwide. Although defined slightly differently across the world, the Blue Economy can be defined as sustainable productive, service, and all other related activities using and protecting coastal and marine resources' sustainable development that meets Goal 14 of the United Nations' Sustainable Development strategy. In this Special Issue, we seek to understand and report on ocean and coastal zone human uses and economic interactions. This includes both the ways in which humans benefit from the marine environment via ecosystem services and the pressures on ocean and coastal environments from human use both in the water (e.g., marine transportation and fishing) and on land (e.g., agriculture and development). [...] For further reading, please follow the link to the Special Issue Website at: https://www.mdpi.com/journal/water/special_issues/the_Blue_Economy

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
