Urban Ecohydrology along the Urban Watershed Continuum: Engineered, Socioecological, and Nature-Based Perspectives

Message from the Guest Editors

The watershed approach has been a powerful tool in ecosystem ecology research for over 50 years, integrating biogeochemical systems to observe input–output fluxes and processes, and has been central to urban water research in the urban Phoenix and Baltimore LTERs. Given the keen interest in green infrastructure and nature-based solutions for urban environmental problems, the integrating power of the watershed approach makes it a powerful tool for understanding the ecohydrological systems of the built environment. Urban ecology has matured over the last three decades by fully incorporating people and their institutions into ecological theory and research. People and their infrastructure are the dominant forces in determining the pathways, magnitudes, and fluxes of chemicals, nutrients, water, etc. Urban watersheds are very complex because waterflows have been so extensively engineered both above and below ground [...]. About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
