

Special Issue

Urban Environmental Policy and Planning: Land Use and Water

Message from the Guest Editor

Water consumption is growing at twice the rate of the population and development is the major contributor to the deterioration of urban waterways. This Special Issue invites research that offers new insight and advocates for successful policy and governance approaches to advance urban water management. We particularly welcome interdisciplinary approaches that address the environmental, social, technical, economic, and legal drivers to understand and advance the integration of land use and water planning. This may include articles on strategic water supply and security planning, integrated urban water management, managing water and riparian landscapes, community engagement and how to connect urban planning and water policy within the decision making process. For further reading, please follow the link to the Special Issue Website at: https://www.mdpi.com/journal/water/special_issues/urban_environmental_policy_planning

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
