

Special Issue

Water Economics and Policy

Message from the Guest Editors

The objective of this Special Issue is to improve knowledge on the use of economic instruments for water policy and evaluation of the impact of water policy implementation. Contributions will be of great value for environmental agencies, administrators and regulators, and will benefit society as a whole by means of identifying ways of maximizing social utility of water resources allocation and mechanisms to implement economic instruments and methodologies. Discussion will be facilitated regarding water policies tackling drought, climatic change and overextraction in most of the arid regions of the world, such as the revision of the EU Water Framework Directive planned for 2019.

Guest Editors

Prof. Dr. Julio Berbel

Dr. Carlos Gutiérrez-Martín

Dr. Julia Martín-Ortega

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.
