

Special Issue

Water Resources and Environmental Management

Message from the Guest Editor

This Special Issue of the journal *Water* invites innovative scientific contributions that address water management at different local, regional, or global levels and integrate an environmental dimension to this management. This Special Issue concerns works addressing the link between water, climate change, and the environment, targeting the identification and evaluation of policies; quantifying the effects on environmental water management to public interventions, land-use change, or climate change; characterising the role of the decision-making process and its modelling; or formalising the interactions between all the biological, physical, and human processes involved. We invite contributions that address such challenges or other possible challenges but with a focus on environmental water management with quantitative and qualitative dimensions of management, as well as with, in a privileged way, a multidisciplinary approach. [...] For further reading, please follow the link to the Special Issue Website at:

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
