

Special Issue

Water Management and Environmental Protection

Message from the Guest Editors

Currently, more than 20 years after the adoption of the WFD, we can point out the effects of the functioning of the new approach to water management and define further challenges. For this Special Issue, studies concerning the latest knowledge in the field of water conditions, protection, and sustainable management, with special consideration of environmental aspects, will be especially welcomed. The topics will include:

- Sustainable management of water resources;
- Evaluation of the ecological status of waters;
- Environmental services of aquatic ecosystems;
- The influence of climate changes on water management;
- Innovative solutions in water management considering environmental needs;
- Water resources modelling;
- Methods of water management optimization; [...]

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
