

Special Issue

Wetlands and Their Roles in the Ecohydrological Cycle under Global Climate Change

Message from the Guest Editors

Wetlands are integral parts of the terrestrial ecohydrological cycle and may have significant impacts on water storage and distribution, water quality, ecosystem productivity, and biogeochemical cycling on land. This Special Issue aims at providing new insights and a coherent overview of different perspectives on these various roles of wetlands. Topics include:

- Developments of new methods and tools and/or case studies of general significance about wetland functions in the context of climate change (and corresponding mitigation and adaptation measures).
- Studies leading to new insights of and perspectives on the interactions on various scales between wetlands, wetland networks and their hydrological catchments, in terms of water fluxes and waterborne spreading and loading of tracers, nutrients and pollutants.
- Studies of temporal, historic to future, evolution of wetland conditions and ecosystem services under large-scale, long-term climatic change.
- Quantifications of ecosystem services provided by natural and managed wetlands and wetland networks across various catchment scales, up to continental and global perspectives.

Guest Editors

Prof. Georgia Destouni

About the Journal

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Editor-in-Chief

Dr. Jean-Luc PROBST
