Message from the Guest Editor

As an unanticipated shock, the COVID-19 pandemic put economies and societies under much stress and brought about further discussion and research, not only in risk management but also in innovation management areas, such as open innovation.

This Special Issue aims to publish findings and observations regarding the relationship between the COVID-19 pandemic and global development with a focus on risk management, innovation management, and resilient systems in areas covering, but not limited to, the following: economic development; SDGs; sustainability; finance; economics; strategic management; supply chain and logistics, marketing and advertising; organizational behaviour; human resource management; labor economics and industrial relations; project management; tourism and hospitality; health services, public health; education; resource and environmental economics, and cultural economics.

We encourage the submission of notes, reviews, original research articles, empirical studies, conceptual papers, short communications, systematic reviews, and case studies targeting any of the above areas, and especially the papers related to the experience of COVID-19 for developing countries.
