Message from the Guest Editors

This Special Issue aims to provide integrated knowledge about the ways disability, accessibility, and inclusivity are linked to sustainability in the built environment through social, economic, and technological practices and systems.

We invite authors from disciplines such as sustainability, environment, building science, design, energy, social sciences, economics, and other related disciplines to submit their papers. Submissions could relate, but are not limited, to the following topics:

- Inclusive and accessible buildings, communities, and cities; Challenges and opportunities of design for disability;
- Social and economic inequalities linked to disability;
- Sustainable design/systems/practices aiming to eliminate discrimination;
- Working with people with disability to achieve an inclusive world;
- Access of people with disability to energy;
- Innovative assistive technology systems.
