

Dear Colleagues,

This Special Issue aims to reflect on the current state-of-the-art-technologies and new developments in all topics relevant to building asset management. We encourage all researchers working in related areas to submit details of their research work. The topics to be considered in this Special Issue include but are not limited to:

- building information modelling;
- digital twins for asset and facility management;
- smart facility and building asset management concepts and systems;
- performance measurement and key indicators in facility management;
- lifecycle facility and asset management;
- data analytics/predictive modelling for building asset management;
- smart buildings;
- innovative contracting for facility and asset management;
- new and emerging trends in facility and asset management;
- best practices in maintenance management techniques;
- quality/total quality management for facility and asset management;
- lean facility and asset management;
- six sigma for facility and asset management;
- sustainable and green facility and asset management.
