

**Figure S1. Validation of the *Fbxw11* knock down in *Keap1*<sup>-/-</sup> cells.** A. *Keap1*<sup>-/-</sup> MEFs were transfected with 100 nM control or *Fbxw11*-specific siRNA for 48 h. Cell lysates were subjected to immunoblot analysis for endogenous βTrCP2 or β-Actin. A representative blot (A) is depicted. The arrow indicates the band of endogenous βTrCP2.
